

National population registers in a Europe without barriers

Hendrik Tamm

eID and Public Registers Conference
Hradec Králov , 07th April 2009

Population Register

- Population register is a base register for national public administration.
- Data contains basic information about individuals and is up-to-date (residents are obliged to register).
- Authority controls safeguards for the disclosure of personal data (national civil registration acts).

Structure

- = No population registration
- = Local population registration
- = Central population registration

Access

-  = No access
-  = Limited access
-  = Access possible

Obstacles

- Specific legal, organisational and technical requirements for each Member State
- Paper based processing of data
- Different access procedures
- Different fee structures
- Different quality of address data
- Different search facilities
- No co-ordination of data exchange on European level

National borders

- European Single Market offers basic freedoms to citizens and business
 - Free Trade
 - Free Travel / Movement
- Civil registration law has still national focus and is not able to react on European requirements
 - Information exchange between population registers
 - Information exchange between national administrations
 - Discrimination of private organisation from other European countries

Why to remove national borders?

- Economy and administration are dependent on the possibility to verify address data against valid and trustworthy registries efficiently.
- Verification and updating of address information in official population registers is one of the most frequently used services in public administration.
- European Data Protection Directive 95/46/EC stipulates the processing of personal data on behalf of the customer for private and public sector

Privacy

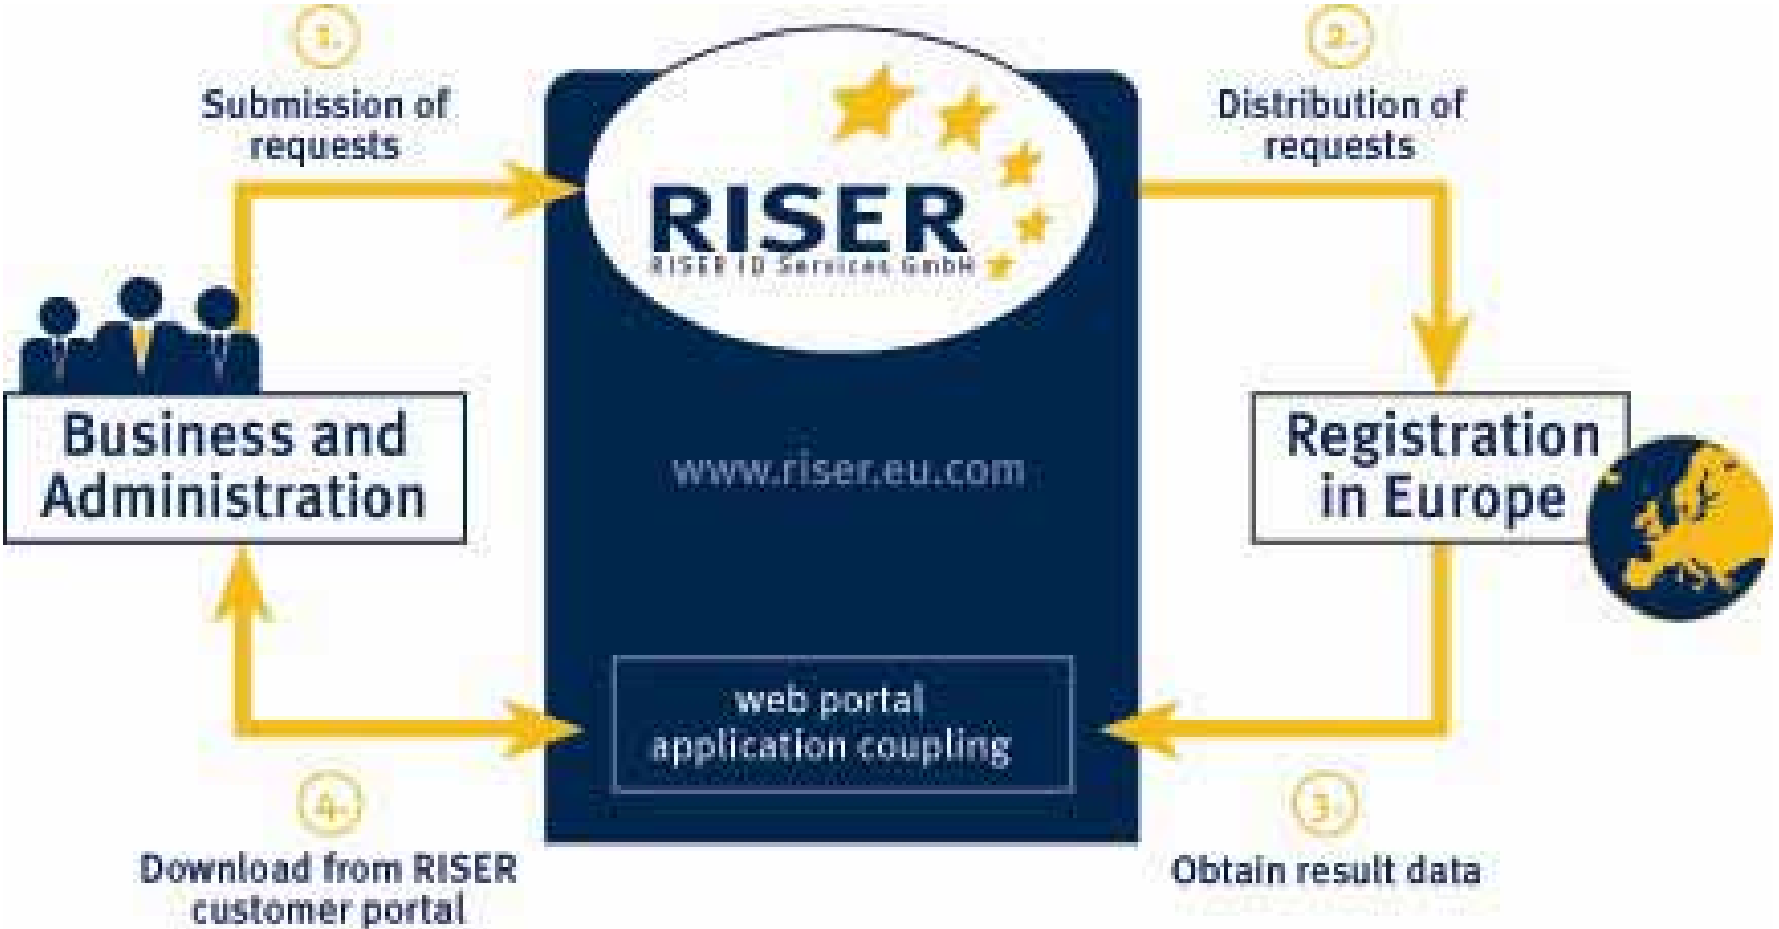

- A number of European countries does not disclose registry data to private and public organisations from other member States. Reason: Privacy Protection
- In these countries personal data is collected and marketed by private address retailers. Quality of private data is often worse than official registry data.
- Authorities loose the control about the trade of personal data. Result:
 - Less protection of personal data
 - Violation of subject right

RISER ID Services

- Registry Information Service on European Residents started in 2004 as an innovative eGovernment service under the eTEN Programme of the European Commission.
- Effectiveness: Deployment of an One-Stop-Portal for Business and Administration to verify address information in European official public registers.
- Efficiency: Reduction of the response time by using electronic data processing.
- Privacy/Trust: Implementation of the European and national data protection and civil registration requirements.

Service

Personal Data

Request Data

- Full name
- Former names
- Last known address
- Gender
- Date of birth
- Personal ID number

Result data

- Full name
- Current address
- Person deceased
- Date of deregistration

Only if person has been identified unambiguously!

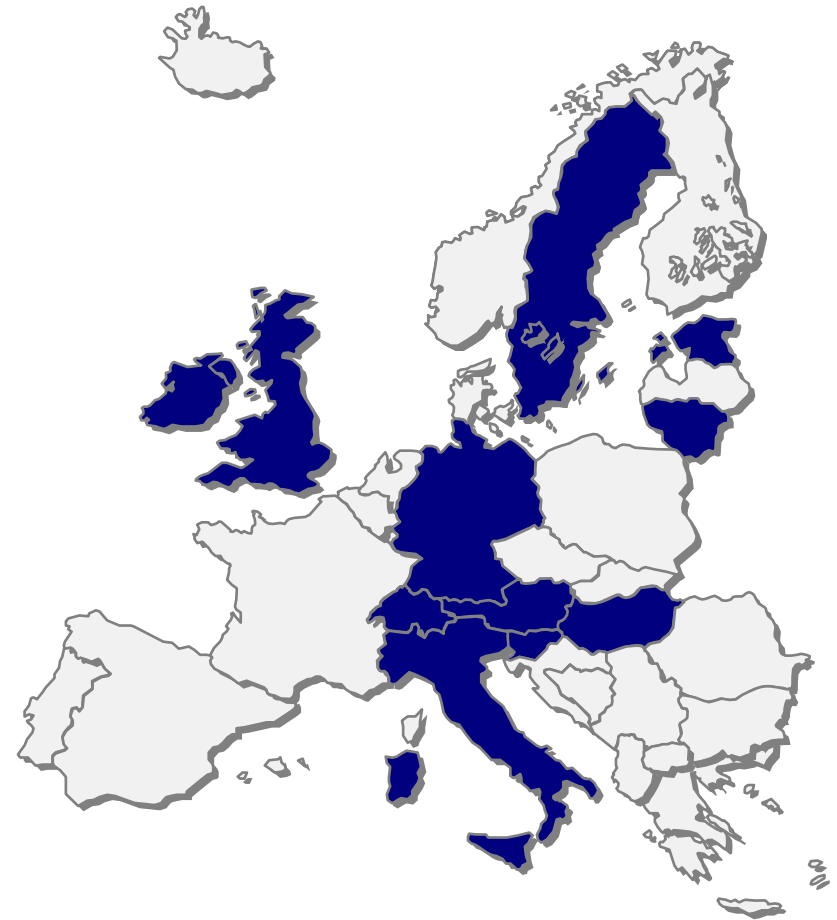

RISER Consortium

- RISER ID Services GmbH (Coordinator), Germany
- KDZ Zentrum für Verwaltungsforschung, Austria
- AS Andmevara, Estonia
- IDOM 2000, Hungary
- ARAM, Poland
- Fraunhofer-Institut FOKUS, Germany
- Waterford Institute of Technology, Ireland
- Wirtschaftsinformationsdienst GmbH, Germany
- LABO Berlin, Germany
- Unabhängiges Landeszentrum für Datenschutz Schleswig-Holstein, Germany
- Slovenian Ministry of Interior, Slovenia
- Genis Ltd., Slovenia

Countries covered

10 Countries / 126 mio. residents

- Austria
- Estonia
- Germany
- Hungary
- Ireland
- Italy
- Lithuania
- Sweden
- Switzerland
- UK
- Extension to 19 Member States

Conclusion

- Population registration is still a national issue.
- Administration and Business suffer from a lack of data exchange in Europe.
- No access to population registers causes less privacy of personal data.
- RISER is the leading service for address verification in European population registers in line with privacy regulations.

Thank you for your attention!
