- Real-time/Playback license plate recognize and record
- Provide license snapshot and car's color for tracking

The screenshot displays the 'Analysis Result' window of the ALPR software. It features a sidebar on the left for camera selection, a main table of results, and a search bar. The table columns are: Recognition Result, Plate Snapshot, Confidence Level, Color, Time, and Channel. The data rows show various license plates with their corresponding snapshots, confidence scores, and colors.
